Art Unit: 1626

Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1 to 31 and 43 to 47 all in part and claims 32 to 41, drawn to compounds of the formula Ia, IIa, IIc and III and pharmaceutical compositions thereof, classified in class 546, subclasses 208 and 276.4 and class 548, subclasses 194, 556 and 568.

II. Claims 1 to 31 and 43 to 47 all in part and claim 42, drawn to compounds of the formula Ib, IIb, IId and IV, classified in class 564, subclasses 157 and 163.

III. Claims 48 to 65, drawn to methods using compounds of the formula Ia, IIa, IIc and III, classified in class 514, subclasses 326, 343, 370, 424 and 428.

IV. Claims 48 to 65 in part, drawn to methods using compounds of the formula Ib, IIb, IId and IV, classified in class 514, subclass 616 and 619.

The inventions are distinct, each from the other because of the following reasons:

The compounds of Group I are patentably distinct from the compounds of Group II because of their structural differences. The compounds of Group I contain a heterocyclic ring that is absent in the compounds of Group II. Therefore a reference that

Art Unit: 1626

anticipates one of the groups would not even render obvious the remaining group.

Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case the process for using the product as claimed can be practiced with another materially different product such as the compounds of Group II.

Inventions II and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case the process for using the product as claimed can be practiced with another materially different product such as the compounds of Group I.

The methods of Groups III and IV are patentably distinct from one another because they use different compounds.

Art Unit: 1626

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

In addition, it would be an undue burden on the examiner if all of the claims were examined in a single application as separate patent, literature and computer searches would need to be done.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election

Art Unit: 1626

must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Fiona T.
